FULL STACK DEVELOPER

I am a full-stack developer who is passionate in tech. When I'm not on my computer, I like going on walk with my dog Bailey. I always had a passion for technology. I have been approached by others when they've experienced tech issues. I enjoyed helping others and solving issues. I am now ready to take the passion to the next level and transition into a new career in software development.

PROJECTS

Projects

I studied software development at iO Academy. During my time there, I worked on a range of projects, both individual and in a scrum team. My favourite projects are listed below, the rest is available on my portfolio.

Email client
Igloo inbox

Using a backend **API** to receive data, Igloo inbox is built with **React**. The application allows the user to display their emails. We used **Bootstrap** to style the app. I worked on retrieving the emails using **Fetch** and on the display of the email in the inbox. We also used event listeners to display emails on the user clicks. The aim was to build a maintainable and scalable app.

Live | Github repo

Listing App (PHP)
Icepac

Icepac is an **Object Orientated PHP** app which is a social media site where user can have their own profile. PHP was used to display the database and **SCSS** for the front-end. We also wrote **PHP unit test** as good practice. I worked on the user profile, using PHP to link the database to the page so that the data will display on the page (avatar, name and bio). The focus was on delivering the best quality code.
